Unique Collections from all over the World

The Museum of Minerals and Fossils is located at the foot of the Świętokrzyskie Mountains.

It is a private collection, gathered due to its owner's passion, where you can admire the biggest rock crystal in Poland, minerals from different parts of the globe and numerous fossils, like ammonites, trilobites or other traces of life from the past. The museum resides in Święta Katarzyna in the building of an old bakery, next to the "Baba Jaga" restaurant, about 400 metres from the entrance to the Świętokrzyski National Park.

Striped flint

The collector’s passion resulted in the foundation of a unique and interesting museum.
